

## IT Asset Management Online

The on-demand way to gain control and effectively manage your IT assets.

## Simplified IT Asset Management

"SAManage is changing the way enterprises will embrace IT Asset Management in the future. By leveraging the on-demand delivery model and building an end-to-end ITAM process around it, SAManage can help customers easily achieve and maintain a fully compliant ITAM program."

M. Murry  
Chief Operating Officer  
SMS, Inc.  
Seattle, WA

### IT Asset Management on-demand

Built using the on-demand delivery model, SAManage helps quickly implement an effective IT Asset Management ("ITAM") solution that can reduce your IT costs by ensuring you know which computers and software you have and organize your IT contracts and software licenses in one place.

Implementing SAManage's on-demand IT Asset Management service will help you gain control over your IT assets and align inventory data with business needs, so you can better manage your assets, vendors, and your budget.

### Key Business Benefits

- Reduce IT costs by knowing which software and hardware assets you use.
- Easily access IT information online and make better decisions.
- Improve vendor management by knowing what you use and what you need.
- Satisfy IT audit reporting requirements quickly at any point in time.
- Detect IT risks such as unauthorized software, missing patches or computers without antivirus protection.
- Ensure regulatory and software license compliance.

### How SAManage enables ITAM?

SAManage allows you to easily view and search hardware and software configuration online, track changes to your assets and know exactly which assets you have. You can organize your IT contracts and software licenses in an online repository, track terms, vendors, purchase records, assets and schedules - even get reminders when your contracts are up for renewal. SAManage makes it simple to analyze and take actions on asset inventory, and is constantly analyzing your inventory to detect risks to your assets and compliance standing.

### No Software or Servers Required

SAManage is leveraging the on-demand delivery model to provide end-to-end IT Asset Management service online. There is no software to install or maintain and no expensive servers to provision, and you can quickly get up and running with SAManage and gain instant value. SAManage is literally deployed in minutes without any complex IT implementation projects, and you can try it for free for 30 days.

Our service fee is based on the number of computers you own. There are no hidden costs, no multi-year contracts or capital outlays required to get started - you pay only for what you use. SAManage will provide all your IT asset management needs at a fraction of the cost comparing to traditional software vendors.

# Better IT control and asset management

## IT Asset Lifecycle

SAManage automates the tracking and asset management of installed software and computers across your enterprise. Detect newly installed software or computer configuration changes and easily correlate assets to departments, users and technical owners. You can easily share that information with other users across your company.

## Software Licenses & IT Contracts

SAManage helps you organize all your contracts, software licenses, agreements and leases in one place, and align your inventory assets with your legal assets. Keep track of terms, entitlements, proof of purchase and renewal dates, and even capture the actual document as an attachment. Get renewal reminders so you can better prepare for upcoming negotiations by knowing what assets you have, what you need, and what terms you negotiated previously.

## Detect Risks & Compliance Gaps

SAManage Risk Detection Engine™ analyses your assets configuration to detect risks such as missing patches, missing antivirus protection, illegal software installed and much more. Get notified of new risks as they are discovered so you can take action before your business is impacted.

SAManage Compliance Engine™ constantly correlates the software you use with your licenses, so you can always stay compliant. The Compliance Engine will notify you when compliance gaps are detected, so you can take immediate action and avoid the legal risk.

## Implement usage policies

Creating a software usage policy that is customized to your business is an important part of keeping your infrastructure secure and your business productivity at its top. SAManage helps you define and enforce a software usage policy, detect unauthorized software installed and used across your company, and help you maintain security within your network. SAManage can also find obsolete software that is no longer supported and helps you plan a migration path.

## Get started today

Activating the service is easy - seamlessly deploy our agents across your computers using domain logon scripts, active directory, or existing software distribution solution. Our agents support all popular operating systems including Windows 95, 98, NT4, 2000, 2003, XP and Vista, and many popular flavors of UNIX and Linux.

Sign up for a free account online at [www.SAManage.com](http://www.SAManage.com), or call us at 888.250.8971 - we'll show you how you can better manage your assets and save money today.

## Your data is secure at SAManage.

Security of your data and service delivery is our top concern. Our servers are hosted in a fully redundant SAS70 tier4 data center, which means that only authorized personal can physically access them.

We use the latest technologies to monitor our network from outside and inside, and our staff is available 24x7 to address any service availability issues.
